

**MMA320 Introduction to Algebraic Geometry**  
Exercises for Chapter 6

- 6.1.** Suppose a hypersurface  $V = (f)$  of degree  $d > 1$  in  $\mathbb{P}^n$  contains a linear subspace of dimension  $r \geq n/2$ . Show that  $V$  is singular.
- 6.2.** Prove that there is at least one line through a singular point of a cubic surface (and ‘in general’ 6). Let  $X \subset \mathbb{P}^4$  be a non-singular cubic threefold. Show that through every point there is at least one line.
- 6.3.** Show that the surface  $V(X^n + Y^n + Z^n + T^n) \subset \mathbb{P}^3$  contains exactly  $3n^2$  lines (char  $k = 0$  and  $k = \bar{k}$ ).
- 6.4.** Find all 27 lines on Clebsch’ diagonal surface:

$$\begin{aligned} X_0^3 + X_1^3 + X_2^3 + X_3^3 + X_4^3 &= 0 \\ X_0 + X_1 + X_2 + X_3 + X_4 &= 0 \end{aligned}$$

All lines are real, 15 are easy to see as intersections with coordinate hyperplanes.

- 6.5.** Find the singular points of the cubic surface

$$X_0X_1X_2 + X_0X_1X_3 + X_0X_2X_3 + X_1X_2X_3 = 0 .$$

Determine all lines on the surface.

- 6.6.** Find the singular point of the cubic surface

$$ZX^2 - Y^3 + TZ^2 = 0 .$$

Determine all lines on the surface.

- 6.7.** Determine the number of lines on the singular cubic surface

$$XYZ - T^3 = 0 .$$

- 6.8.** Let  $P_1, \dots, P_6$  be 6 points on a nondegenerate conic  $C = (f) \subset \mathbb{P}^2$ . The linear system  $\mathbb{P}(S_3(P_1, \dots, P_6))$  of cubics through these six points gives rise to a rational map  $\mathbb{P}^2 \dashrightarrow \mathbb{P}^3$ . Compute the equation of the image.
- 6.9.** Let  $\pi$  be the skew projection of a smooth cubic surface from two skew lines  $l$  and  $m$  on a plane through the transversal  $l_1$ . Show that  $\pi$  is a regular map and determine which lines are blown down.
- 6.10.** Let  $S$  be the cubic surface, which is the image of the rational map determined by the linear system of cubics in the plane through 6 points, no three on a line, not all on a conic. Describe the 27 lines in terms of points and curves in the plane.
