Calculation of $P(a < X \leq b)$ for $X \sim \mathbf{N}(\mu, \sigma^2)$

Generally,

$$
\begin{aligned}
P(a < X \leq b) &= P(X \leq b) - P(X \leq a) \\
&= P\left(Z \leq \frac{b-\mu}{\sigma}\right) - P\left(Z \leq \frac{a-\mu}{\sigma}\right) \\
&= \Phi\left(\frac{b-\mu}{\sigma}\right) - \Phi\left(\frac{a-\mu}{\sigma}\right)
\end{aligned}
$$

As an example, suppose $\mu = 100$, $\sigma = 10$. Then

$$
\begin{aligned}
P(94.3 < X \leq 115.2) &= P(X \leq 115.2) - P(X \leq 94.3) \\
&= P\left(Z \leq \frac{115.2 - 100}{10}\right) - P\left(Z \leq \frac{94.3 - 100}{10}\right) \\
&= P(Z \leq 1.52) - P(Z \leq -0.57) \\
&= \Phi(1.52) - \Phi(-0.57) \\
&= 0.9357 - (1 - 0.7157) \\
&= 0.9357 - 0.2843 \\
&= 0.6514
\end{aligned}
$$

since, by symmetry, $\Phi(z) + \Phi(-z) = 1$.

Normalfördelningen

Låt $Z \sim \mathrm{N}(0,1)$. Tabellen nedan ger $\Phi(z) = P(Z \leq z)$ med fyra decimalers noggranhet för $z \geq 0$. Då $z < 0$ använd att $\Phi(z) + \Phi(-z) = 1$.

Normalfördelningen

Låt $Z \sim \mathrm{N}(0,1)$. Tabellen nedan ger $\Phi(z) = P(Z \leq z)$ med fyra decimalers noggranhet för $z \geq 0$. Då $z < 0$ använd att $\Phi(z) + \Phi(-z) = 1$.
