

Applied research school

- Name: Applied mathematics
- WASP: They have to have some flexibility for which courses to take, e.g. it is compulsory to take courses only from one or two of the areas Computational mathematics, Mathematical statistics, and Optimization. Should optimization be compulsory? WASP ethics course should be counted as a GTS course (and replace the Chalmers ethics course). Change Mathematical statistics to Mathematical statistics/data science.
- 60hp not so much and therefore, the remaining courses (not including GTS) should be in mathematics/mathematical statistics and at high enough level

All research schools

- How many points at pure PhD level?
- Examiner decides courses counted from Master's degree, be clear about how this is done.
