School of Mathematics and Computer Sciences
Chalmers University of Technology and Göteborg University

Course diary So far I have lectured basic material of Chapters 5-9, 21 (Lax-Milgram theorem, Riesz representation theorem), 14 and I'm in the middle of chapter 15. Next week (V6) hopefully I'll be through chapters 15 and 16. So at most 2 hours in week (V7) will be devoted to chapter 17 and the major part is left for solving/discussing old exams.
Tommy have had corresponding exercises from the list above.
